TEENAGERS SUCCESSFULLY LAUNCH BALLOON INTO THE STRATOSPHERE

At 9am on Monday, 24 August four year 11 students from Cockermouth School successfully launched a balloon from Mosser that reached a height of 36,000m into the stratosphere.

Jack Scott said,

We're over the moon that we managed to launch the balloon successfully, It has been months to plan for this day, and then the weather delayed our launch date too. The launch day wasn't without its' challenges, but we did it! The balloon managed to reach a height of 36,000m before it popped, which far exceeded our expectations.

Our team mate Joe was in the 'chase car' that followed the balloon. Fortunately, it fell pretty much where we predicted. It was a bit of trek up a hill in Ackensacthdale. near Richmond in the Yorkshire Dales but it had a soft landing thankfully so all the cameras and sensors are still intact. We're really looking forward to analysing the

All four were jubilant and delighted with the successful launch and retrieval. During their flight the balloon's radio transmissions were picked up by radio enthusiasts as far away as Belgium and France. The students have recorded 5,000 separate data readings taken during

The sixteen year olds, Joe Moore, Jack Scott, Natasha Stannett and Poppy Watson, supervised by Jonathan Moore, have spent the past twelve weeks planning the launch. Now they have the data to analyse and a report to write as part of the CREST Gold Award.

Sky high hopes for lockdown learners

By Tracy Walker

FOUR students from Cockermouth School have not let lockdown get in the way of their learning.

The teenagers have spent the past 12 weeks working on a project to launch a balloon into the stratosphere.

Joe Moore, Jack Scott, Natasha Stannett and Poppy Watson, all aged 16, plan to launch the balloon when the weather is stable.

The four year 11 students, who are being supervised by Jonathan Moore, hope to achieve a British Science Association's CREST gold award.
